

BURIED RISKS:

Exploring Landfill Impacts

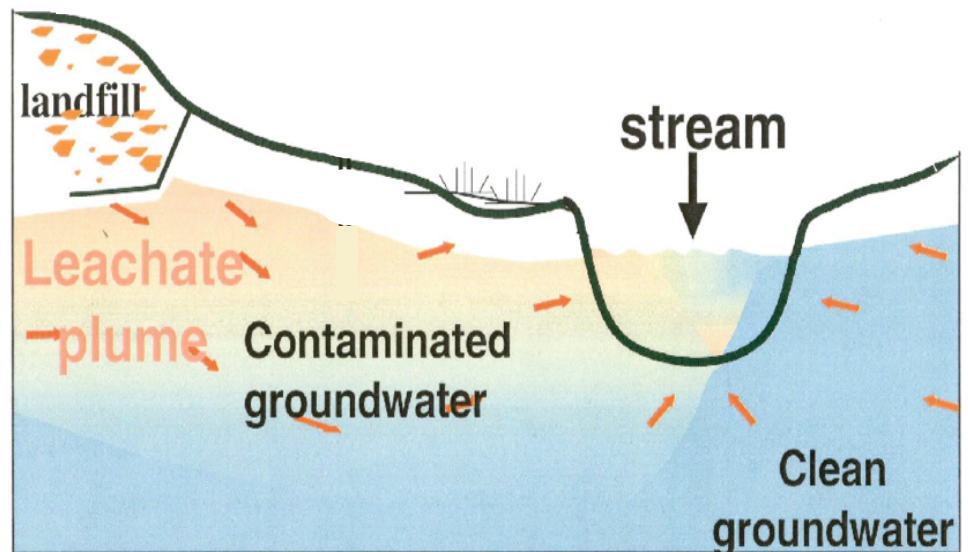

Landfills are dangerous to the environment and human health. Did you know TOXIC waste from fracking operations is taken to our local landfills? The contaminated waste contains forever chemical pollutants and radiation that can cause:

- RESPIRATORY ISSUES
- CONTAMINATED DRINKING WATER
- POLLUTED STREAMS
- CANCER

Mon Valley communities and Yukon have been impacted by the waste. Join our discussion on what is happening in our local landfills. Hear what it's like to live near a landfill. Learn what you can do.

Polluted Air
